

ISTHMUS MERIDIAN

The private-markets back office, rebuilt as an AI company.

FOUNDING-PARTNER OPPORTUNITY · DUBAI · JULY 2026

The crossing, and the line you cross it by.

We started with the part that kills most AI companies **already solved**.

Most vertical-AI startups raise money, then hunt for customers and beg for data. We begin with all three in hand.

A live, paying anchor

Customer zero is already invoicing - real revenue, not a pilot.

Recurring revenue

The services business funds the build - no venture burn to survive.

A proprietary dataset

A continuously refreshing corpus of real private-markets deals.

We don't burn capital to survive. **We get paid to build the moat.**

Every fund runs a six-figure back office by hand.

Modeling, diligence, investor materials, portfolio monitoring, fund ops
- artisanal, manual, expensive, and rebuilt from scratch on every deal.

THE CURRENT WAVE OF AI TOOLS DOESN'T FIX IT

- | Horizontal copilots pointed at documents from the outside - no proprietary data, no ownership of the work.
- >< The foundation-model labs are already encroaching on exactly those thin wrappers.
- ↘ The market has turned brutal on tools any GP could replace with a Claude or Opus subscription.

We don't sell the tool. We run the work.

By operating a fund's back office from the inside, we own what the copilots can't touch: the end-to-end execution data and the encoded workflow that produced it.

The flywheel isn't a plan. **It's already turning.**

CUSTOMER ZERO · LIVE

Isthmus Meridian runs AND Capital's back office today.

Institutional decks, deal models, diligence and portfolio materials for a Calgary growth-capital GP in energy transition, real assets and health & wellness - with proprietary CIS deal flow.

Eight functions. One operating layer.

01

Origination & sourcing

02

Diligence & evaluation

FLAGSHIP

03

Modeling, valuation & structuring

04

Capital formation & materials

05

Fund operations & admin

06

Portfolio monitoring

DIFFERENTIATOR

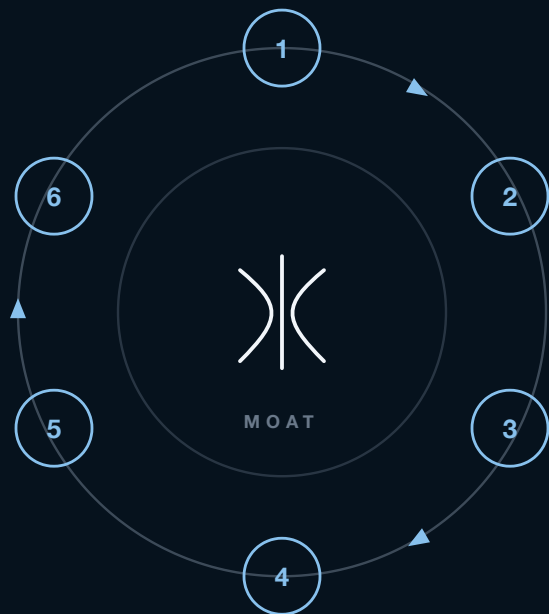

07

Technology, data & AI

08

Research & intelligence

Every function is manual labor today. Every function is a candidate for automation - **customer-funded R&D, one workflow at a time.**

- 1 Run the back office → **recurring revenue** funds the build.
- 2 Every deal deposits **proprietary data + an encoded workflow**.
- 3 That corpus **automates the next deal** - cheaper, faster.
- 4 Automation converts labor cost into **software margin**.
- 5 Proven workflows **productize** - sold to the next fund.
- 6 More funds → more data → better product → **repeat**.

Enter at a services multiple. **Exit at a software one.**

A moat you can't scrape from the outside.

THE WRAPPERS

- ✗ Point at documents from the outside
- ✗ Public + user-supplied data
- ✗ A cancellable seat license
- ✗ Exposed to foundation-model encroachment

ISTHMUS MERIDIAN

- ✓ Run the work from the inside
- ✓ Proprietary end-to-end execution data
- ✓ The operating layer itself
- ✓ Defended by data the labs can't see

We do the work - the AI is **how** we do it, at expanding margin. That's the 18-36-month defensibility the market now demands, built from the one place it can't be copied: the inside.

The market is already paying for this - richly.

RECENT VERTICAL-AI FINANCE VALUATIONS

Rogo - Series C

Hebbia

\$250M \$500M \$750M \$1B

Rogo: \$75M raised Jan 2026 - Sequoia, Henry Kravis, Wells Fargo, J.P. Morgan. Hebbia claims ~1/3 of top global asset managers by AUM.

WHERE COMPS TRADE · ARR MULTIPLE

20–38x

0x 20x 38x 50x

One of the richest-funded categories in the market.

Those companies sell tools from the outside. **We own the operating layer from the inside** - and thousands of GPs run the same manual back office AND Capital does.

Structured so the moat holds - legally, operationally, geographically.

01 · DOMICILE

Dubai HQ, India delivery

A Dubai free-zone entity (DIFC/ADGM) as the client-facing, IP-owning contractor, with a wholly-owned India delivery center - tax-efficient, common-law, on the corridor.

02 · DATA RIGHTS

Engineered up front

A formal data-and-IP agreement is the founding document - abstracted process templates and eval sets, not raw client files, with clear ownership of the models and platform.

03 · ALIGNMENT

Equity-for-data

AND Capital contributes data rights + anchor revenue for equity - turning the anchor from a client who hoards its edge into a shareholder who wants the product to win.

PROPOSED

04 · PERIMETER

A clean, unregulated lane

We run production, analytics, ops and technology. We never make investment decisions, solicit LPs, or give regulated advice - that stays with the GP, by design.

THANK YOU

The crossing, and the
line you cross it by.
